Hi George,

1/ I have the basic structure for landing page ready for your feedback.

| <http://www.chitaitai.com/test/>

2/ I now need your input :

2.1/ Basic structure feedback.

| Please note dark blue is the most common theme. Red is too bright and not audible to customers. Choice is yours though

2.2/ Logo Design.

| Can you design a logo. Size is extreme important. The current logo is not looking good because original image was wrong size. Logo should be: Width: 656 pixels, Height: 170 pixels

2.3 Menus.

| If you can brainstorm and come up with a comprehensive list of menu. We will then deliver them in phases. Please this is customer facing side. We will do the backend on another phase
| This of all the actions and options that you want your customers to see.

2.4 Window Dressing

| The main area is for your window dressing

| I have sample pictures there because the ones you gave me last time are wrong sizes.

| For the main window, pictures show be: Width: 285 pixels, Height: 355 pixels

2.5 Product Catalogue

| Replace current place holders with your product narrations

2.6 Pricing Information

| Do you display prices?

2.7 Responsive Screens

| Your need to redo your Window Dressing but for Mobile Screens.

| i.e. re-arrange the Landing Page but for various form factors. e.g. Samsung Galaxy Mini, Samsung Galaxy S7, Tablet, etc

Let me know when you are done.

Thanks,

David
